EALING BROADWAY STATION ENTRANCE

PROJECT BACKGROUND
This station is used by over 20 million people a year, both as a gateway to Ealing Broadway – one of 13 metropolitan town centres in London – and also as a key interchange between the Central and District lines, and National Rail. When Crossrail opens in 2020 the number of people using the station will jump even higher, and we need to make sure that the surrounding streets can cope.

VISION FOR PUBLIC REALM
The public realm proposal for the station entrance will massively improve the character of the area, while providing a distinctive new civic space that will cope with this upturn in visitor numbers.

As people on foot outnumber vehicles on The Broadway by nearly four to one, the pedestrian experience is at the heart of this proposal – for the sake of safety, comfort and to provide a good impression of this key gateway to the borough. New seating, wider footways, additional trees and a new signalled pedestrian crossing will help to welcome people to Ealing Broadway.

LANDSCAPE MASTERPLAN - 1:500

DESIGN STRATEGY
- Provide for busy pedestrian flows by widening footways where possible
- Make getting around easier with new pedestrian crossings
- Add to the existing character of Haven Green by protecting existing trees, and providing new ones where possible
- Carefully position street furniture to minimise impact on pedestrian flows
- Include cycle parking near the station entrance, to enable more sustainable travel
- Avoid high maintenance costs in the future by designing for durability
