Northala Fields - Proposed Controlled Parking Zone

Northala Fields Car Park Proposals

Before the end of the year, the council will be carrying out a host of improvements to the car parks located at Northala Fields, which may impact the parking demands in your area.

Northala Fields has been a popular destination since opening in 2008. The site is served by two car parks, which are in poor condition and as bays are not marked out, drivers do not park efficiently. Currently, there is capacity for approximately 72 vehicles (34 in the eastern site and 38 in the north). During periods of high demand, car parking overspills onto the A40 slip road.

The proposed improvements to the car parks include:

- Increasing the capacity of the eastern car park from the existing capacity of approximately 34 spaces to 99 marked spaces, including 3 disabled parking bays.
- Formalising the parking spaces in the northern car park to ensure the maximum capacity of 38 spaces is maintained.
- The introduction of “No waiting at anytime” restrictions on the slip road outside the northern car park.
- Improving the condition and surface of the car parks and implementing a sustainable drainage system (SUDS).
- The introduction of a reasonable hourly charge for car parking to encourage a turnover of vehicles and thus making the sites accessible to more visitors.
- Improving access to the site for pedestrians and cyclists and to provide cycle friendly facilities within the car parks.
- Improving cycling facilities in the area in line with the recent improvements in Ruislip.

Is a controlled parking zone needed in your area? - Have your say

The council are already aware that the existing parking arrangements at Northala, often lead to parking problems in the immediate area. The limited capacity and lack of control within the car parks, means visitors often seek parking in adjacent roads. The proposed improvements to the car parks are intended to increase parking provision and accessibility for visitors. The intention to introduce an hourly charge for the car park, is necessary to encourage a turnover of vehicles, however it’s possible that this may result in some visitors seeking free parking in surrounding roads. In view of the existing and potential parking concerns in the area, your Ward Councillors have asked us to consult residents on the possibility of introducing controlled parking in your area.

Whether you drive, walk, cycle or use public transport, we want to hear your views.

Please read the enclosed information and give careful consideration to the proposals. Your views are important and this is the opportunity for you to have your say.
Consultation Area

The map below shows the area we are consulting for controlled parking.

Depending on the response to this consultation, a controlled parking zone may be recommended in all or part of this area. The council will always seek to establish a logical and appropriate zone from the area identified in the plan. However, if there are some roads within the consultation area that are not in support of controlled parking, the council’s CPZ Policy provides the flexibility to amend the boundary if a suitable zone from those in favour can still be formed.
FAQS & Further Information

Over the next few pages, we have tried to provide answers to the most common queries we tend to receive concerning controlled parking zones. However, if your query is not found below, you may contact us using the details on the back page. Please note, this is a generic information, so not all will be relevant to this scheme.

How does the Council decide whether a controlled parking zone is introduced?
The Council’s decision to implement a controlled parking zone is based on a combination of factors.

- Feedback from local residents and businesses responding to the consultation
- Road safety and traffic flow
- The environmental and air quality impact of parking and traffic

Although the responses we receive to the consultation form a key part of the decision making process for introducing a CPZ, the final decision will also take into account the factors listed above. A CPZ consultation is not a referendum, as public opinion is only one of several factors that must be considered.

Are CPZs just another way for the Council to make money?
No. The cost of implementing and maintaining a CPZ is quite high. Furthermore, the cost of permits contributes towards the enforcement of the zone. If funds are generated through CPZs, then the Council is legally obliged to reinvest this in transport related schemes and improvements across the borough.

If a CPZ is introduced, what will the operational times be?
The operational hours of any new CPZ are dependent on the response to the consultation. We ask residents if there is any parking pressure in their area and if so, to identify what they consider to be the main cause. From the responses received, we are able to determine the most suitable operating hours required to resolve the parking pressure residents have identified.

Do CPZs reduce the overall parking capacity?
The Council endeavours to maintain present parking arrangements and to retain as much parking as possible, however the council have a duty of care to ensure our roads are safe and accessible for both pedestrians and motorists. For this reason, we do have to provide waiting restrictions, particularly around junctions, to maintain visibility and keep crossings clear.

Private Roads
Private roads located within a proposed CPZ area, will not form part of any prospective zone, however residents may still give their views as part of this consultation.

Cul-de-sacs
As cul-de-sacs only have one point of access, sufficient space is required to enable vehicles to turn around so that they may safely exit the way in which they came. Residents may have become accustomed to reversing out from cul-de-sacs, but this is not a practice that the Council can encourage. For this reason, waiting restrictions may be used to ensure vehicles have adequate space to turn around.

Footway Parking
Within a controlled parking zone, the Council must ensure that sufficient space is retained on the footway for pedestrians while preserving the width of the carriageway to enable access for emergency and refuse vehicles. Footway parking is only permitted in marked bays that are accompanied by the appropriate sign.

Low Car Housing
Many new residential developments are classified as ‘low car housing’. In most cases, such properties will not be entitled to purchase parking permits for controlled parking zones. Residents of such properties are advised to refer to their tenancy or purchasing documentation for further information.

Road Safety & Accessibility
When designing controlled parking zones, we must take into account the safety and accessibility for both pedestrians and motorists. We install either single or double yellow lines to help prevent unsafe and obstructive parking.

Our design must ensure that there is sufficient road width to allow for the safe passage of emergency vehicles and refuse vehicles. Examples of these are:

- Junction Protection - Double yellow lines are placed around junctions to improve visibility for driver, cyclists and pedestrians and to allow sufficient space for wheelchair and pram users to safely cross.
- Yellow Lines placed along narrow roads to improve access or to provide a passing point for moving vehicles.
Can I continue to park across my driveway?

Within a CPZ, all lengths of the road must be marked with either a yellow line or a parking bay. This includes the dropped kerbs in front of driveways. Some residents prefer to have the driveway clear at all times while others use the space to park an additional vehicle or to provide a space for visitors to park.

Parking bays are marked across driveways and accompanied by a white advisory line, showing that access is needed at all times. However, permit holders using their own driveway or their visitors with a valid permit, can park across the driveway without being penalised. This option reduces the required number of signs and maximises the available parking during the hours of CPZ operation. While this inevitably leads to understandable concerns among residents of having their driveway blocked by fellow permit holders, in practice, this system works effectively and is the most popular option throughout the existing CPZs in the borough.

If a yellow line is placed across a driveway, anyone who parks on the yellow line during the CPZ hours of operation, including the resident or owner of that house, risks receiving a parking ticket. Outside of these hours the CPZ ceases to operate, and the restrictions apply as they do currently, with the resident able to give permission for visitors to park and to seek enforcement action where necessary.

- Please note, where a driveway provides access to a shared property i.e. a block of flats, or houses converted to flats, a single yellow line will be introduced by default, unless requested otherwise.
- Should a CPZ be introduced, the option favoured by the majority of respondents will be applied across the zone. However, if you have any specific objections or requirements, please let us know.
- Residents parking in their driveway, will not require a parking permit. Permits are only required for motorists wishing to parking on the road during the operational times of the zone.

Common Bay & Line Types

Permit Holder Bays
During the operational hours of the CPZ, a permit or blue badge is required to park in these bays. Outside of the operational hours, these bays are free to use.

Shared-Use Bays
Shared-use bays are usually located along flank walls or adjacent to parks and provide parking for multiple road users. Typically these bays are for permit holders but are also made available for short or long term visitors. Shared-use bays are a good way of making efficient use of available parking. They allow other road users to park in bays that may otherwise unoccupied during the day whilst residents are not home.

Stop & Shop Plus Bays
Stop & Shop Plus bays provide a period of free parking, but also allow users to pay for additional time if required. Additional parking may be purchased via mobile phone, meaning users may prolong their parking session remotely, without needing to return to their vehicle.

Single Yellow Lines
Single yellow lines within CPZs are primarily used to provide passing places or to keep certain sections of the highway clear during peak times. They may also be used to protect access to driveways and private property. Throughout CPZs, single yellow lines operate for the same hours as the zone itself, unless there are signs specifying otherwise.

Double Yellow Lines
Double yellow lines are generally used in locations where parking should be avoided, such as around junctions or on one side of narrow roads.
Resident Permit

Harmful air pollution exacerbates health conditions and motor vehicles contribute to this. The council wants to encourage residents to use vehicles which are less damaging to the environment and our health. This means that prices for parking permits will be related to the CO₂ emissions of a vehicle, as used by the DVLA, which at this time is the most reliable and comprehensive source of information to assess the impact of a vehicle on the environment.

Four factors are used to assess the price of a resident permit

- CO₂ emissions
- Fuel Type
- Number of cars in the household
- Length of controls of the controlled parking zone

The table below shows how we work out your permit price.

<table>
<thead>
<tr>
<th>Basic Permit Price</th>
<th>Amount of CO₂ emitted (g per km)</th>
<th>Engine Size (cc) (Only used if CO₂ data is unavailable)</th>
<th>Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>Emissions Band 1</td>
<td>0 - 100g of CO₂ emitted per km</td>
<td>0 - 1100</td>
<td>£50</td>
</tr>
<tr>
<td>Emissions Band 2</td>
<td>101g - 140g of CO₂ emitted per km</td>
<td>1101 - 1600</td>
<td>£75</td>
</tr>
<tr>
<td>Emissions Band 3</td>
<td>141g - 185g of CO₂ emitted per km</td>
<td>1601 - 1849</td>
<td>£100</td>
</tr>
<tr>
<td>Emissions Band 4</td>
<td>186 + of CO₂ emitted per km</td>
<td>1850 +</td>
<td>£125</td>
</tr>
</tbody>
</table>

Surcharges & Discounts

- Nitrous Oxides (NOₓ) charge (Applied to diesel vehicles manufactured before 2015) + £50
- Electric vehicle discount (Applies only to fully electric vehicles, not hybrids) - £20
- Additional vehicle charge (Price is multiplied by the number of other vehicles already holding a permit in the household) + £50
- Short controlled parking zone discount (Applies to parking zones where restrictions apply fewer than four hours a day) - £20

Please note that a minimum permit price of £20 applies to all vehicles.

What if I have visitors?

Visitors may park in permit bays by using our visitor park by phone service, operated for the council by PayByPhone. The parking information is stored electronically so there is no need to display a paper voucher in the vehicle. Visitor parking is charged at 60p per hour up to a capped all day fee of £4.50. Users are only charged during the hours the CPZ operates.

Business Permits

Business permits are available for those that need vehicles for their business. The annual cost of a business permit is £800. This is comparable to other London boroughs.

What about customers and visitors?

Should a CPZ be introduced, the Council would ensure suitable parking facilities are provided for customers and visitors. These range from short term Stop & Shop bays, to Pay & Display and pay-by-phone options. Council officers will evaluate the types of businesses in the area and provide the most appropriate facilities.

Carers’ Permit

There are two types of carers’ permit. Professional, for those who visit multiple people at various locations and Personal, for those visiting one individual at a specific location. The annual cost of each permit is £45.

Blue Badge Holders

Blue badge holders may park for free within any bay unless stated otherwise.

Electric Vehicles - Charging Points and Dedicated Parking Bays

Ealing Council is currently working to provide a network of charging points for electric vehicles across the borough. The use of electric vehicles can help reduce local air pollution and CO₂ emissions. Electric vehicle (EV) registrations are rising in Ealing and the Council continues to receive many requests from residents to introduce electric vehicle charging points (EVCPs) in its streets, particularly from residents without the ability to charge off-street.

The Council have already identified a number of locations across the borough where charging points are proposed and intend to introduce at least one EVCP in your area. As part of this consultation, whether you own an electric vehicle or are considering getting one, we want to hear from you. Please give us your views by responding to the relevant section within the CPZ questionnaire. Depending on the feedback received from residents, EVCPs may be implemented in your area.

For further information on electric vehicles and existing charging point locations, please visit www.sourcelondon.net

Secure Cycle Storage

Do you cycle or have an interest in cycling, but lack the space to accommodate a bike at home? A bikehangar may be the answer. The introduction of bikehangars is part of the council’s work to promote healthy and green travel options, and provide opportunities for residents to safely park their bikes for an annual fee of £72. Council policy also supports the installation of cycle parking on the carriageway in order to reduce clutter on the footway.

A bikehangar (shown above) is approximately the size of half a car parking space, and is designed to store 6 bikes securely on the street. If you are interested in having a bikehangar installed near you, please let us know by responding to the relevant section within the CPZ questionnaire. Depending on the level of demand, bikehangars may be introduced in your area, even if a CPZ is not.

For further information, please visit www.cyclehoop.rentals
Please give us Your Views and Have Your Say

The council would like to know your views on the proposed CPZ. Please read this document carefully and consider the proposals. Have Your Say by completing the online survey on a computer, tablet or smartphone:

www.ealing.gov.uk/northalacpz

- Please be advised that only one response will be accepted per address.
- Do you have access to a computer, tablet or smartphone? Maybe your own or that of a friend, relative or neighbour? You will be helping the council save time and money as well as your own postage costs by completing the questionnaire online. If however, you do not have access to the internet and would like to request a paper questionnaire, you may contact us on the number below.

The closing date for this consultation is:

Friday 25 October 2019

What Happens Next?

Your responses will be analysed and discussed with your Ward Councillors. The results of the consultation will be made available online at www.ealing.gov.uk/consultations or you may contact us for an update using the details overleaf.

Prior to implementation, the Council is required to carry out a 21 day statutory consultation. This involves notices being placed on lamp columns in the proposed area and the publication of the notice within the Ealing Gazette. This process provides the public with a further opportunity to comment on the proposals. All comments and objections will be considered and responded to, before any decision is made to proceed to implementation. Following this process, if a CPZ is approved for implementation, it will become operational within approximately 6 months.

Further Information

If you require any further information regarding this consultation that is not covered within this information booklet, or you do not have access to the internet and require a paper questionnaire, you may contact us in Highway Services:
