5.7. ARTICLE 4 DIRECTION CONSIDERATIONS FOR EALING GREEN CA	18
6. CONSULTATION	19

1. Introduction

This plan sets out the local authority's approach to managing the future of the Ealing Green CA. It is based on an appraisal of the character of the CA, the statutory planning policies affecting the area, the role of other local authority services in the area, and the requirements and aspirations of local people – both residents and businesses.

It is very much a partnership document, 'owned' by all parties involved in producing it. This partnership approach means that the plan will be respected, and will be guided by the conduct of all the partners.

2. Policy

This Management Plan indicates how the policies in the Local Development Framework (LDF), along with other matters, will figure in the on-going management of the Ealing Green CA. It is not a planning policy document itself however, and it does not form part of the Local Development Framework (LDF).

Ealing's Local Development Framework comprises a series of documents. The following documents have a bearing on the Conservation Management Plan:

- The 'Unitary Development Plan' (UDP), also known as the Plan for the Environment. This contains the statutory policies for development in the CA and elsewhere in the borough. Volume One of the UDP has policies for all types of development. There is a specific policy on conservation in Chapter Four on Design (policy 4.8). Volume Two of the UDP shows sites and areas across the borough. The Ealing Green CA is indicated in Table 10.12 and Map 8 in Volume Two of the UDP. The UDP also has a "Proposals Map" which specifies the definitive boundary of the Ealing Green CA. It should also be noted that the UDP comprises the development plan for the borough along with the Mayor of London's London Plan. For most purposes, the London Plan policies are reflected in the UDP, and there are cross-references to them in the UDP.

Ealing Green Conservation Area Management Plan

- The series of Supplementary Planning Guidance and Supplementary Planning documents provide more detailed guidance on how the statutory policies should be applied. These cover topics, sites and areas.
- The Local Development Scheme sets out the programme of work on future planning policy. This includes reference to a Supplementary Planning Document on Conservation, which is currently being prepared, and which will be subject to formal consultation in the autumn of 2007. In May of 2007, the Council's preferred options for the planning of the borough will be published.
- The Statement of Community Involvement sets out the Council's commitments to community involvement in all aspects of town planning, including matters pertaining to the Ealing Green CA.
- There are also other documents providing background information and monitoring data in the LDF. All published information on the Local Development Framework is on the Council's web site at www.ealing.gov.uk/planpol

3. Conservation Area designation

Ealing Green is one of 29 (twenty-nine) of L.B. Ealing's Conservation Areas (CAs) and it is managed, like the others, by the legal regulations of the *Planning (Listed Buildings and Conservation Areas) Act, 1990*. The Council operates its responsibilities under the Act to "preserve and enhance" the character of the CA. The Council will also undertake regular reviews of the area to monitor the quality of development and the effectiveness of its policies and guidance.

3.1. Character appraisals

The Council has completed a Character Appraisal for the Ealing Green CA, of which this Management Plan is a further part. The Appraisal has been produced to describe and evaluate the special architectural and historic interest of the CA. The statement of character will provide a basis from which to evolve not only the making of development control decisions, but also for the informed framing of design guidance. The Appraisal is the basis for the direction of this Management Plan, identifying the elements of special interest of the Ealing Green CA that require attention or effort. The Appraisal also provides a valuable resource upon which to defend Appeals against refusal of planning permission.

3.2. Archives and the importance of the past

The CA contains a significant portion of historic fabric and evidence of this has been included in the Appraisal to demonstrate the evolution of the area, particularly over the past 200 years or so.

The earliest settlement in the area was called "Yealing" and it developed around the old Church of St Mary, in the southern part of the CA. Archaeological evidence shows that parts of Ealing have been occupied for at least 7,000 years. The Appraisal deals with its evolution from this time up to the 21st century. Historic maps of the late 19th and 20th century demonstrate how a village grew up into a large and prosperous Victorian suburb along the main routes. Archival material, taken chiefly from the local sources maintained by L.B. Ealing, has been included in the Appraisal to provide a sense of historical depth and to illustrate the reality of Ealing's past. Elements of this past may still be felt and understood, the CA in fact contains an unusually high number of buildings of historical and architectural interest (at local and national level) thus posing questions about their protection and enhancement

of their setting as the development of sites and to existing property within the CA inevitably unfolds.

4. Development control

As a result of the demand for development, the character of the CA is under constant threat posed by unsympathetic, poorly designed and executed new buildings, extensions and alterations. Most of these are already controlled by existing legislation, administered by the Council's professional officers. High quality development control plays an important part in managing changes to the CA.

4.1. Principles for development control

The Ealing Green CA and its immediate surroundings are under strong development pressure. Ealing acts as a very busy shopping centre for western Greater London, with its extensive range of high street shops, but also with a few small family businesses. Within the CA and facing the main streets are terraces or groups of buildings dating from the late 18th century to the 1930s and beyond. These provide a wide variety of architectural styles and details. Nevertheless the poor quality of several 1950s, 1960s and later developments provide opportunities for new improvements. Modern shopfronts and signage in many cases spoil (especially along Bond Street) the overall appearance of many fine Victorian and Edwardian buildings. The residential stretches of the CA, although they do not offer opportunities for major developments, are under a lot of pressure for small-scale interventions to the residential properties. Sensitive and responsive management is required in order to cope with this pressure and the following principles will be adopted to guide the Council in its control of development:

- 1) The Council will apply the principles, guidance and regulations outlined in the *Planning (Listed Buildings and Conservation Areas) Act 1990* and the broader guidance of *Planning Policy Guidance Note 15 (PPG15)* and any subsequent revisions or additions.
- 2) The Council will apply the policies outlined in its *Plan for the Environment, the Unitary Development Plan (UDP)* as adopted in October 2004, until such time as these policies are replaced by policies in the emerging *Local Development Framework*.
- 3) The Council will require all planning applications to be supported by a Design and Access Statement. This should be a brief but thorough guide to the reasons for the development and

Ealing Green Conservation Area Management Plan

how the design fulfils these, together with a statement concerning any access issues that may exist.

Officers of the Council can provide assistance to applicants with more information and with examples on file of successful Design and Access Statements.

- 4) A major requirement for any development proposal in a CA is quality, covering the design, materials, workmanship and execution.
- 5) The Council will not dictate on the choice of architectural styles of any proposed new buildings, extensions or alterations but the position may be simply put as follows:
 - Contemporary and Modernist styles are entirely acceptable if they are high in quality and provided that they remain sympathetic in the context and towards the host building and/or other neighbouring buildings

OR

- Replicas of good, older buildings may be preferred provided that they are properly researched and high in quality. The design, scale, massing and detailing of such Traditionalist schemes should accurately replicate the contextual, local materials.
- 6) The drawings through which proposals are submitted should clearly and competently demonstrate the intentions of the development, preferably being accompanied by photographs and anything else that can demonstrate the project's aims.
 - 7) The Council will make use of technically experienced and qualified Officers in guiding the assessment and determination of all applications received.
 - 8) Applications for work in CAs must be accompanied by clear indications of the materials to be used in producing the external finish and architectural details of the proposed buildings. Actual samples of the materials should be submitted as part of the preparations of the

Ealing Green Conservation Area Management Plan

scheme and/or in the course of beginning on-site building operations.

- 9) Where possible, the Council recommends pre-application consultation. Planning Services and applicants may thus work jointly to produce schemes that are successful and high in quality. Experience has demonstrated that advance work of this sort is the most effective and efficient way of preparing applications.

5. Preservation and enhancement

5.1. *Understanding the asset*

The Character Appraisal of which this Management Plan forms a part is central to understanding the Ealing Green CA and its future needs. As a result of the appraisal process, including the public consultation exercise, the aspects of the area that are under the most threat have been identified and a number of negative features, which need to be addressed in this Management Plan, identified. These are as follows:

Spatial:

- Busy traffic dominates the main roads and junctions, exasperated by the mainly cluttered pavements (Bond Street, The Green and St Mary's Road)
- Use of utilitarian materials such as concrete slabs, tarmac, average quality street furniture
- Areas of very poor paving with disturbed street surfaces
- Dominant street "clutter" e.g. service boxes, redundant railings, signage, bollards, etc.
- Back land areas and gap sites that create fractures within the urban grain
- Poor setting for some of the Listed Buildings: e.g. St John's Church, Westfield House, St Mary's Building.
- Loss of front garden boundary walls, trees and fences

Buildings:

- Poor condition of some of the buildings in the CA

Ealing Green Conservation Area Management Plan

- Poor quality later developments that are not sympathetic with earlier and valuable architectural remains
- Poorly designed shopfronts and uncoordinated street furniture
- Very poor quality shopfronts displaying the following negatives features:
 - Over-deep fascias
 - Garish colours
 - Shopfronts in need of repair
 - Dominant and poor quality lighting
 - Unattractive signage

- Poor quality extensions and alterations generally
- Satellite dishes on many front elevations
- Many buildings in need of repair and require restoration of lost architectural features such as cornicing, windows, and doors
- Demolition of original boundary treatments
- Replacement of early boundary treatments with new walls of inappropriate design and materials
- Conversion to hardstanding of front yard especially in Mattock Lane
- Poor quality roofing materials, have replaced the original natural slate or tile roofs

5.2. *Maintaining quality*

The Council's attention to quality in the Ealing Green CA will be maintained through its contribution to the following elements of development and alteration.

1) Quality of applications

In line with PPG15, the Council will not accept outline applications for proposals in CAs. Full applications will be required to be supported by properly drafted, accurate, scale drawings with plans, sections and elevations. In many cases for large schemes the Council will also expect analytical drawings, showing proposals in context, either through streetscape sections or three-dimensional images.

2) Quality of materials

The Council will, where possible, require that materials proposed are submitted as part of an application and not as a Condition.

3) Details

Where appropriate to aid in the assessment of an application, the Council may require the submission of large-scale construction detail drawings. This enables officers to check the quality of what is proposed and ensure that on site design is not left to the builder.

4) Experienced persons

The Council will always advise that applicants appoint both consultants and builders who have experience in historic building work.

5) U-PVC (Unplasticised Poly Vinyl Chloride) in window frames and other architectural elements

The Council has a well-founded preference for traditional, renewable materials and will therefore exercise its powers to advise and to insist, in cases where appropriate against the use of architectural elements and fenestration details in U-PVC or other manufactured substitutes. For buildings which are in commercial uses, or for flats, planning permission is usually required to install such windows and the Council can take enforcement action against any windows which have been installed without permission. For family houses, the Council can also control the use of such modern details and materials through an Article 4 Direction. More information is provided in section 5.7 – *Article 4 Direction considerations for the Ealing Green CA*.

Plastic window frames and doors are not felt to be able to replicate the quality and appearance of original timber windows in CAs. U-PVC is non-renewable and contributes to pollution. When used elsewhere on buildings, such as porches, barge-boards and conservatories it can have a negative effect upon visual appearance that should not be permitted in CAs. Depending on the individual circumstances, aluminium may not be considered an acceptable replacement for steel in window frames.

Generally, the Council believes that it is the attention to detail and the specific concern about quality at all levels that will help to preserve or enhance the character and appearance of the Ealing Green CA.

6) Alterations and extensions to roofs and their covering materials.

The roofscape is an important element of the character of the CA. Any works whether for new buildings, extensions, alterations or the replacement of existing roof coverings, require planning permission to ensure that special care and attention is paid to the scale, the massing, the design and the materials employed.

- **Dormer windows**

Inset dormer windows will usually be accepted on the rear roof slopes but only rarely on the front or the side. They should not dominate the roof slope.

Dormer windows should be of traditional design. A roof shape in keeping with the original profile is preferred but a flat roofed dormer may be necessary in smaller or shallower roofs, to allow 500mm to the ridge, valleys and hips. All dormer windows should be finished with moulded eaves, cornices and timber fascias. Where possible the window(s) of the dormer should align with the windows of the main house.

There should be no tiling on the front elevation.

- **Roof extensions**

Roof extensions should be built within the existing roof slope: they should not be wrapped around two roof slopes, exceed the height of the ridge, or form a continuation of the wall below. Changing a hipped roof to a gable should be avoided.

The ridge of the roof should not be raised to accommodate greater headroom: this will change the proportion of the house and may spoil the character and uniformity of the street scene.

- **Rooflights**

Rooflights will usually be acceptable on the rear roof slopes and on occasion on the sides. Any rooflight should be a “conservation rooflight” which lies flat in the roof.

- **Tiles**

Tiles /slates should match the original in type, material and colour. Interlocking tiles are rarely appropriate.

- **Chimneys**

Chimneys are a particularly important element of the character of the Borough’s CAs and the Council has a

Ealing Green Conservation Area Management Plan

clear preference for the retention of existing chimneys where they contribute positively to local character and for ensuring that new proposals that include chimneys are high in quality of design, materials and execution.

- **Extensions**

The proliferation of unsightly and over-scale rear, side or roof extensions are regarded as detrimental to the historic environment of Ealing Green. They change the original relationship between buildings. For this reason, applications for extensions of this sort will be carefully considered and, where necessary for the preservation of local character, will be resisted.

7) Brickwork

The management of brickwork and the pointing of walls is a critical issue in preserving details of the Ealing Green CA. The Council will discourage the use of rendering, pebble dashing, painting and other new surfaces over existing original brick facades.

8) Rear plots, outbuildings and boundaries

Whilst most of the buildings in the residential stretches of the CA face onto the street, with concealed gardens and yards behind, a substantial number of properties are set back from the streetline with large front yards. The management of front yards is crucial both for the appearance and character of the street as well as for the architectural character of properties.

Elsewhere in the existing CA, the Council will ensure that the removal of existing traditional boundaries and gardens will be resisted and that proposals to replace or develop boundaries or front or side gardens will be appropriate in their materials and of high quality design that is compatible with the historic character of the CA. The removal of mature trees, unless dead, should not be permitted in order to create hardstandings.

A number of service buildings and single storey garages, and a few unsympathetic later constructions, detract from the general quality of the residential areas of the CA.

As opportunities for new improved development occur, the Council will seek to ensure that new buildings “preserve or enhance” the CA and that, where possible, negative features are removed.

Garden buildings should be small scale and sited discretely, taking care not to locate them too near trees. They should be for ancillary garden use and comprise a single, modest-sized room. Timber is the most appropriate material to ensure they blend with the landscape.

9) Shopfronts and signage

A considerable number of buildings within the shopping thoroughfares of the CA are considered to be of local or national significance¹. Shopfronts should follow the precedents set by those around them and the architecture of the building in which they sit.

The Ealing Green CA retains large numbers of mostly modern shopfronts (Bond Street), while occasionally remnants of original, usually late 19th century shopfronts, remain (The Green). The Council has published a Shopfront Guidance leaflet which advocates the use of traditional materials and details, but this appears to have been largely ignored. Also, many of the shopfronts have been installed for many years and the owners do not want to change them, so improvements can usually only be achieved through the planning process as properties change hands. Firm development control and possibly grant aid is required to ensure that the appearance of the CA is incrementally improved, and the Council will take enforcement action against owners of shops who install new shopfronts or who alter their existing shopfronts without planning permission.

The Council will therefore pay special attention to applications to alter or develop these commercial frontages and will ensure that proposals are high in overall quality and make a positive contribution to the character and appearance of the CA. All changes will also have to adhere to the Council's Shopfront Guidance leaflet. The Council will also look into updating the existing Shopfront Guidance to ensure that all shopfronts within the CA are included (e.g. shopfronts along Bond Street, the Parades of shops along St Mary's Road and the at the end of Mattock Lane)

¹ Ealing's Adopted Plan for the Environment, 2004, p.37

10) Satellite Dishes and Telecommunication Installations.

Satellite dishes are a common problem in many CAs. They disfigure the fronts of historic buildings and also cause a loss of historic character when fixed in locations that may be seen from the streets and open spaces.

In the Ealing Green CA satellite dishes are regarded by the Council as not being in character and therefore will only be acceptable when they cannot be easily seen from the streets or other public parts of the area.

The rules governing satellite dishes in CAs are significantly tighter than outside such areas. These state that the installation of a satellite antenna on any building or structure within the curtilage of a family house in a CA is only permitted development if the following conditions are met:

- The dish does not exceed 90 mm. in any dimension;
- No part of it must exceed the highest part of the roof;
- It is not installed on a chimney;
- It is not on a building exceeding 15 metres in height;
- It is not on a wall or roof slope fronting a highway or footway;
- It is located so its visual impact is minimised;
- It is removed as soon as it is no longer required; and
- There is not a dish already on the building or structure.

Similarly, strict controls exist on commercial buildings and flats, and it is likely that planning permission will be needed for any satellite dish which is on the front elevation of a building, or a roof facing the highway. If in any doubt, contact the Council's relevant development control officer.

Telecommunication installations are regarded as causing great potential harm to the historic character of the Ealing Green CA. The law governing the erection of masts and antennae is complex and whilst some companies have licences which allow some structures to be put up in CAs without planning permission, the legislation does allow for consultation with the local authority concerned before the work is put in hand. Further information can be found in the second edition of PPG8 *Telecommunications*.

5.3. *Preserve or enhance*

As outlined in Planning Policy Guidance Note 15 (PPG15), proposals for work within the historic environment and, in particular, within CAs must, as a minimum, preserve the character of the CA.

The Council supports this standard as a basic requirement but will always encourage applicants and their agents to develop schemes that will actively enhance the character of the CA. In meeting these fundamental requirements the Council will require that proposals are demonstrably a faithful replication of the local historical precedent or a high quality contemporary building as described above in 3.1.

5.4. *Elements at risk*

As previously described in the Appraisal and summarised in section 5.1 of this document, the quality of the Ealing Green CA has been damaged to a degree by a variety of factors including:

1. Impact of the busy traffic and poor pedestrian movements
2. Poor quality setting for the Listed Buildings
3. Poor quality later developments
4. Advertising and signage that is boldly designed, and that uses inappropriate modern materials, making it visually dominant
5. Uncoordinated street furniture
6. Shopfronts that are badly detailed and in poor condition
7. Satellite dishes on many elevations
8. Loss of historic features on many of the buildings
9. Buildings in need of repair and improvement
10. Use of poor quality materials for roofs, windows and facing materials

The Council regards it as important to improve these negative features and to ensure that actions are taken to positively preserve or enhance the Ealing Green CA in the following ways:

Issue 1: The Council's *Development Strategy for Ealing Centre*² – in the *Easier Movement and Transport* section proposes the enhancement of public transport and the introduction of traffic calming measures to be implemented by 2012.

The Council could in fact consider the installation of some traffic management measures to try and reduce the speed of through traffic along the main thoroughfares and other improvements to provide greater pedestrian priority.

Issue 2: The appraisal has identified several areas of back land and gap sites that create fractures within the urban grain and contribute to poor connectivity. Ealing's UDP identifies most of those areas as "Development Sites"³.

In particular **Site No 55**, including Ealing Studios, Ealing Hammersmith & West London Collage, St Mary's House and BT building.

The Site 55 includes:

- On the western edge of Ealing Green, within the Ealing Green Conservation Area
- Flanking Walpole Park to the west, Pitzhanger Manor to the north and Ealing Film Studios/University House to the south

- Site 55 - Constraints

- Development should respect the open nature of adjoining land the architectural and historic importance of the area
- Retain educational use of the Ealing and West London College site
- St Mary's House, used by BT, is listed as Grade I
- The whole site is within the Ealing Green Conservation Area and adjoins (on the northern part of the site) Metropolitan Open Land
- Must not impact on the Park, Pitzhanger Manor Rose Garden and the Manor itself as a Grade I listed building) is an historic area and must be respected
- The listed St Mary's House could be enhanced by new development

² *Ealing Centre – A Strategy For Sustainable Improvement 2002-2012*. October 2002

³ *Ealing Adopted Plan for the Environment, 2004*, Vol 2, pp. 64, 65

Ealing Green Conservation Area Management Plan

- Walpole Park - Grade II (English Heritage Register of Parks and Gardens)
- Potential to produce a comprehensive development site
- Enhancing the picturesque setting of Ealing Green
- Combining the sites should enable a higher density of development
- Opportunity to improve educational use possible joint-use with Thames Valley University
- Library/learning resources centre opportunity
- More efficient use of building space, (enabling TVU and Ealing Studios to collaborate to develop the media studies courses offered by TVU and Ealing and West London College and enterprise opportunities and facilities offered by Ealing studios)

- Site 55 - Preferred Uses

- Cultural and creative industries (TV and film production) and offices; education; performance, museums; community facilities; public realm and some opportunity for restaurant/cafe
- EB3A: Ealing/Green/Ealing Tertiary College – refurbishment/redevelopment (retaining Ealing Green High School building and PO frontage). Improved education facilities combining use with Thames Valley University, possibly new public Central Library (as an alternative to Site EB1). Provide new road access south through site to Ealing Studios Media Village
- EB3B: Ealing Studios refurbishment of listed buildings and redevelopment of non-listed buildings to create media village comprising film/TV studios, offices, workshops, museum and performance space
Development can take advantage of views over Walpole Park

The Council will do its utmost to facilitate the redevelopment of these sites to ensure that they will achieve the desired improvement in terms of their townscape value, setting of Listed Buildings and the enhancement of the local character and identity⁴.

Issue 3: Most of the later developments within Ealing Green CA that have been identified as detrimental within the Character Appraisal (see section 5.5, page 31 of

⁴ For further information, please refer to Planning Brief of Site 55, of the Ealing's UDP.

Ealing Green Conservation Area Management Plan

Ealing Green Conservation Area Character Appraisal) they should be replaced with high quality developments.

This will hopefully create not only an architectural environment of much higher quality but also provide a much more suitable setting for the valuable early architectural remains of Victorian and Edwardian times.

Issue 4-5 -6: The stakeholders' consultation responses suggest the reduction of street "clutter" (signage, bollards, railings, street lighting etc) and the use of more traditional materials. Also more coordinated street furniture would be welcome.

The Council will need to consider these issues, including the possible improvement of the Listed Buildings within the context of the future development schemes⁵.

Matters such as signage and advertising are already controlled through existing legislation. The Council will ensure that in future all such changes adhere to the *Shopfront Guidance* leaflet and other guidance contained within the UDP and subsequent documents. The provision of grants from the Council would help to ensure that local businesses improve their frontages.

Issue 7: The control of satellite dishes has already been discussed in section **5.2 Maintaining quality**. Usually, planning permission is needed if the satellite dish is visible from the public highway and the Council will enforce against unauthorised dishes.

Issue 8 and 10 See **5.2 Maintaining quality**

Issue 9: Several of the historic buildings in the existing CA are in need of some kind of improvement, e.g. replacement of U-PVC windows, re-roofing in traditional materials, or repairs to details such as corncicing, eaves and verges. A grant scheme, such as the Townscape Heritage Initiative scheme, which is a partnership between the Council and the Heritage Lottery Fund, could provide the funding for a range of improvements and repairs. Subject to the Council being able to provide match funding, and the support of English Heritage, a grant scheme would help to encourage local property owners to improve their buildings, including new shopfronts.

⁵ In particular for Ptzhanger Manor and Grounds will be the subject of an application for a Heritage Lottery Grant for a conservation and regeneration scheme that aims to ensure the long life, use and maintenance of the Listed Structures. See, Donald Insall Associates, *Pitzhanger Manor Conservation Plan*, July 2006.

5.5. Monitoring and Review

The Council will review its CA Appraisals as part of a five-year programme of regular review and monitoring in compliance with policy reflecting the obligations imposed by the *Planning (Listed Buildings and Conservation Areas) Act 1990*.

5.6. Conservation Strategy and Practice

Ealing Council is in the process of reviewing its 29 designated CAs, some of which have in place Article 4 Directions (A4D) where these are appropriate. To maintain all aspects of the “special character and appearance” of the 29 CAs, the Council will need to retain technical advisors specializing in the preservation and conservation of historic buildings, landscapes etc. A regular five-year cycle of study and review will also be needed to be maintained to assess and monitor the CAs with the aim of the preservation of the areas in the long term. Overall, the Ealing Green CA must be protected for both its residents and business owners, and a programme of improvements instigated to achieve its preservation and enhancement.

5.7. Article 4 Direction considerations for Ealing Green CA

When or after designating a CA, the Council can bring under planning control a number of changes to single family dwellings meaning that all significant changes or developments would require planning permission (called an Article 4 Direction – A4D). The majority if not all of the properties presently within the Shopping Area in the CA are in commercial uses or are used as offices, where such changes, including replacement windows (a particular problem in the CA) already require planning permission. However, the residential sections of the CA contain a number of terraced, single family dwellings where an A4D would ensure that the architectural interest of the buildings was not eroded by incremental, unsympathetic changes.

The Council could consider if it is appropriate to propose the application of A4D in parts of the CA and for selected classes of developments.

Ealing Green Conservation Area Management Plan

Subject to the classes of development selected, the adoption of an A4D could result in the requirement for planning permission to be obtained for all new windows and doors, extensions, porches, changes to the front elevation materials and roofs, and the creation of new driveways and vehicular hardstandings.

The serving of an A4D on family dwellings, and stricter development control over incremental changes to commercial and flatted properties, will in time result in improvements to the visual appearance of the CA.

In case the Council would consider proposing a selective Art4(2) in the CA. This intention will of course be subject to public consultation.

6. Consultation

The strength of the Ealing Green CA Appraisal and Management Plan relies on the knowledge and commitment of business owners, residents, and other key stakeholders.

Both documents have been produced in partnership with members of the local community who have provided the authors of this work with their expert views and knowledge to help positively shape the future of the CA. Wider views will be sought for both the Appraisal and Management Plan, during the next five-year period before the next CA's review.
